Deleting an image You must delete every image on your hard drive before you can start a new image. To delete an image, open the image in Photoshop (or any program that can open PSD files) and then select File | Create a New Document to get back to the New Document dialog box. In this dialog box, check the New

Folder option and then click OK. Photoshop will now create a new folder for you to put your image in. To delete that image, choose File | Windows | Stacks to return to the Stacks dialog box (see Figure 11-2). There, click the Delete button to the left of the highlighted file. You may now safely delete the file. FIGURE 11-2: Choose Stacks to remove a file from the folder it's in. To get rid of a file _ and all of its corresponding _ layers (along with the

Photoshop is most commonly used by web designers, graphic designers, photographers, and discerning hobbyists. It has the advanced editing tools that professional designers need but its user interface is slow and bloated. Photoshop can be used for all three types of editing: retouching/photoshopping images; converting images to different file types; and converting graphic designs for the web.

1. Photoshop basics

1.1 Photoshop Elements and Photoshop

While Photoshop and Adobe Photoshop are different

applications, with Photoshop having more features, Photoshop Elements uses the same software application and interface. The only difference between the two is that Photoshop comes with Photoshop and Photoshop Elements doesn't. Unlike Photoshop, there is no need for a subscription to download Photoshop Elements. It can be purchased through online stores and is also available as a free download.

1.2 Comparing the two interfaces

The differences between the two interfaces are

that Photoshop has a toolbar, layers and windows, each with different functions. Photoshop Elements has the same top menu, bottom toolbar and file browser, with different features. Elements uses toolbars like those found in other graphics editors like Adobe Illustrator, which is where Photoshop Elements finds its toolset. While Photoshop Elements has fewer features than Photoshop, it has more features for the beginner and it's a lighter application. 1.3 Drag and drop Unlike Adobe Photoshop, where it is easy to

use the menus and toolbars, you can drag and drop items like text, images and brushes right into the new canvas and even create a new image.

1.4 Layers

In Photoshop there are default layers such as the Background layer. This can be removed by clicking on the layer and choosing Delete Layer. Unlike Photoshop, Photoshop Elements has the ability to create custom layers. Layers allow you to adjust and combine multiple images on the image at once.

2. Retouching images

2.1 Photoshop Elements and

Photoshop Photoshop Elements uses the same features for editing images as Photoshop. To edit images in Photoshop Elements, you drag items onto the canvas to make changes to the layers. This includes drawing text, adding filters, editing photos, removing objects from images and so on. To correct the image further you click the area you want to edit and press the Enter key to the right of the keyboard. The same key is used for undoing edits.

2.2 Brush and brush

The most commonly used tool for ret

Ikea's own invention, the self closing LUM sofas, have come in for some serious criticism for the way in which it grabs furniture in homes. It is thought this can result in suffocation and even death, but can we please stop? Swedish Furniture-maker HAYHUA, who are responsible for this, have received a torrent of abuse on social media over the sofa, with people calling it 'dreadful', 'sketchy', 'frightening' and 'totally ridiculous', with one Twitter user

calling it 'shocking.' The company has since told FEMAIL that the sofas are safe, and that the company has alerted the Swedish Consumer Ombudsman with concerns about their three self-closing sofas, which were launched in 2016. Ikea's self-closing LUM sofas have been banned in Britain over fears it could be unsafe HAYHUA told FEMAIL: 'We have the impression this sofa is currently being perceived as a niche product, which is rather an over-reaction. We have taken the decision to focus on the

products which we believe will make an immediate difference in people's lives, and self-closing sofas was not one of those.' In a statement on the firm's website, the firm said the self-closing mechanism only gets activated when a baby is on its back, and added that people are 'expected to assist' in stopping the mechanism. However, as FEMAIL points out, this position is wrong, as the simple act of pushing forward on the sofa or putting your arms over the top can stop the mechanism. Swedish furniture-

maker HAYHUA has received plenty of abuse for a sofa which has the 'self-closing' function. While HAYHUA say they've sold about 4,000 of the sofas in the UK, only a tiny fraction of them have been reported to have problems – if you're still worried about it, now is the time to complain. With thousands of people tweeting about self-closing sofas, and people posting pictures of themselves in the middle of the night, it's probably time to put down the bananas and perhaps hand over a few of
