Exporting: File Export Manager (FEM), 3D models may be exported in a number of formats including DWG, DXF, IGES, NC3D, STL and X_REF. Raster image processing (RIP) AutoCAD Raster Image Processing (RIP) supports raster images and is used to "delineate" the image, to extract and use objects from

the image, and to create and edit the image. Previous Releases Before AutoCAD 2000, AutoCAD was able to read and edit the files in Photo CD, which had two layers of CD-ROMs on top of each other. The lower layer had a standard image (think of it as a picture), and the top layer had the.CDX or CDG file that described how to display that image on the CD-ROMs, with animation (e.g., 3D rendering, sound effects, etc.). The next few releases included a CD-ROM drive to play these image files and allow the use of

CD-ROMs as input and output. For example, the Viewer could load a raster image or design from a CD, and also export a saved image or drawing back to CD. In addition, the Viewer could display images and 3D views on the CD-ROM in a 3D window. Support for Photo CD files ended in version 2.5. AutoCAD Raster Image Processing (RIP) 2.5 supports the CD-ROM, and includes the Viewer and the editing and conversion functions of RIP 2.4, which have been repackaged as a stand-alone software

package, called RIP 2.5. AutoCAD Raster Image Processing (RIP) can create and edit some of the data contained in the CDG or CDX files, which describe the appearance of the image. It can open, format, and save images and other raster-type data. RIP can create a limited amount of animation, as well as various layer types, such as, title and layer grids, which help to create a specific layout. I have the following UPDATE query for a database: UPDATE Review SET Rating=2 WHERE Date='2015-01-16' I want to change this into a SET query. This is how I am trying to do it: SET @Rating='2' UPDATE Review SET Rating=@Rating WHERE Date='2015-01-16' My question is, how do I change this query to a SET query? A: You need to change the SQL

into the following: UPDATE Review SET Rating=@Rating WHERE Date='2015-01-16' Or, you can use set: SET Rating = 2; UPDATE Review SET Rating = @Rating WHERE Date = '2015-01-16'; If you wish to do this with a function, you can use: UPDATE Review SET Rating = CASE WHEN @Rating IS NULL THEN Rating ELSE @Rating END; However, this will not work for dates. This will cause an error: UPDATE Review SET Rating = 2 WHERE Date = '2015-01-16'; Msg 8114, Level 16, State 5, Line 6 Error
