I love the fact that they released this 1st release of the 5.2 interface! I've been using Photoshop for 4+ years without upgrading, and it seems like a new interface. I had to re-learn almost everything, but I'm loving it. It's pretty much a testament of how good the software is if ten people posted comments about how much they dislike the new interface. It may not be the most intuitive interface ever, but it's still a big step forward, and it feels good every time I use it. the new interface looks good and works well for me. I've used it for a few days and I'm satisfied. I like that everything is on one screen. It's faster than the previous interface, as you don't have to switch screens between a horizontal/vertical timeline, and the display is clean and sharp. I also like that you can avoid file previews, and just view your photos on the inside as if you're in photoshop. The interface is much smaller, which also makes the application faster. The Lasso tool now has a cleaner shape attached to it. I think it's a lot better with the new interface. I saw a demo earlier where they discussed the performance. That was also impressive. The ability to format and position objects on the canvas, without a need to use any blades, is also faster. Best of all, it won't slow down. It's fast from the start, even when loading a very big file. Saving photos is even faster. The editing tools themselves are more intuitive. I think both the interface and performance are great.
