Photoshop is a great tool, but there are plenty of options out there for free or cheap. A few of my favorites include Pixlr, GIMP, Paint.NET, and the online services Oden and PicResize . Of course, you can always create your own. I recently acquired a Sony Alpha 7R. I was looking for a new DSLR and, in my opinion, the Sony was the best camera I could buy for under $1,500. $1,199 will get you a simple, solid camera with standard ISO capabilities and a good, responsive 18-point autofocus sensor. So, why did I not immediately buy it? First off, I found the Sony's user interface to be somewhere between unintuitive and clumsy. Wouldn't this would leave a serious gap in an intuitive camera? That was my first concern, but there were more major concerns as well. That plus the almost creepy fact that Sony is very hesitant to sell a full-frame camera at under $1,500 will prevent this camera from reaching a wide audience. This month, I'm very excited to test the Sony Alpha 7R. This is the first full-frame entry-level DSLR I've tested in five years, and it will be my first dSLR purchase in more than nine years. And, I'm excited to work with this camera because it sits smack-dab in the middle of my needs and desires: It's compact enough to take everywhere and has an amazing autofocus system. It's a strong performer and smoothly grades its images in an effort to mimic film. My plan is to use the Sony Alpha 7R as my primary model for my main portfolio shooting. With it, I will be able to work "from the middle" and share images in a way I'm unable to by Canon's lineup. I'll write about my experiences working on this camera, and I'll be working from the Middle with the A7R for mainstream reviews. I'll also feature the finer details of this camera and its features.
