The new Photoshop Creative Cloud app is now available for the first time, a perfect alternative to using Photoshop natively in the browser and Lightroom for the iPad. Now I can work on my images in full-featured Photoshop on the iPad without the hassle of a computer and, at the same time, have access to all my images in Lightroom on my Mac at home. The new Photoshop app is a much more professional product than the old Photoshop.app on the Web, as we are now using its cross-platform features to its fullest. iPhone users do miss out on the full-featured editor and features that make Photoshop ideal for the iPad, but as long as they stick to doing so in the browser, they will be fine. I consider the new Photoshop app to be the best app that the iPad has ever had, with its deep integration with Lightroom. I can also use it with all my images, sorted by Lightroom, but luck line-outs to Photoshop. I wish I could import all my Lightroom images to Photoshop, and then export all my Photoshop images to Lightroom, but apparently this is not yet possible. I find it sad, but Photoshop is now not compatible with Dropbox or any other online storage mechanism, so that will remain something like a hassle for now. Some may experience problems with using the app and Photoshop CS6 on the Mac side, too, which is why I recommend using the Web app as much as possible. I still have some concerns about some of its limitations and Screen Mode, so I have reduced my rating. Photoshop Elements is a program that anyone can use. It is an excellent tool even for established pros. I like it so much that I keep that version of Photoshop Elements as my default editor. What I mean by that is that when I open my images in Photoshop Elements, the program always opens with the Elements interface. A tutorial is at the bottom of the screen, and I often find myself using the tutorial rather than the program's default mode. Over time, I find it easier to edit using Elements than to edit in Photoshop and I find myself wishing that the program automatically transitioned between Photoshop and Elements so that I could learn elements finer points by having to learn the \"pro\" way of doing things. If you can handle the interface, you can use Photoshop Elements. For everyone else, Photoshop is the better option. If you like Elements, you will be perfectly happy with its editing prowess.
