It's really a great program. I have used it for many years. If you're new to Lightroom you should really look into this program to learn how to manipulate digital cameras, etc. It's not for beginners. Ps 5.3 is far from a bad app. It has some quirks, but I do think it's pretty robust and stable, and some if the features it offers are indeed greatly appreciated. There are people here who will disagree with me on this, but I do really see a difference between a package that's cheap in price, but lacks 'meaningful' features, and one that's just a very good value for money. The price point on Ps is very good. Although I found the trial was a bit clunky, and wasn't exactly ideal (both in terms of design and content), the Ps 5.3 trial could be re-used and the 30 day trial is really not much to ask for. And with a Designer Edition, I could use it as a core app for almost any project. The versions are too new to give any meaningful assessment of the product. Does the company market and sell to cost conscious photographers or professionals willing to pay for the easiest way to edit their work outside of Lightroom. I am hopeful that this well respected company continues to refine the product so that it provides the full editing features of more expensive competitors without the mind-numbing application and database size that using them within the program would require. But I am not sold on the marketing appeal of the company or founder. The company market plan is to sell branding and a proprietary platform that defeats their other products both in quality and price.
