As with Affinity Photo, some small details are streamlined. When you're looking at your settings in different places, the PSD file opens up directly when you click on the dialogue box where you want to open it. You can also now drag and drop folders onto PSD files and have a new version created from inside the folder. This is handy for syncing folders on hard drives. The Files panel is now continuous, with the refreshes happening more rapidly through it. The Preferences panel doesn't automatically disappear after you close it, which I don't know if that's a good thing or a bad thing. Multiple Lightroom compatibility issues, such as the ability to do pan and zoom (which includes dealing with UI/desktop) are gone. Reynolds Kauffman has some nice thoughts in response to showing off the app in a client's meeting. I think one of the reasons some people are not sure about this piece of software is that Photoshop CC 2015 doesn't look like the PS CC that launched in 2012. Perhaps the newest version feels a bit transitional. I also think that the process of opening and closing documents and folders is a bit cumbersome when you're working with a large amount of PSDs, so I could see how customizing certain aspects of the experience might be a larger issue than Adobe expected. The iOS app works well for creating, finding, and sharing your work, but it doesn't help you with print. I expect that with time, Photoshop for iOS will become a better multi-device experience, especially once a location-based workflow is implemented. In the mean time, I learned to deal with the software that comes with the iPad Pro's Pencil, and have a better idea of how I might work on the device. I expect Adobe will fix issues that may arise from Print, but since this is free, I hope they make some changes.
