Great review all around, although I'm really not a Lightroom user past the fact that I'm working on one project at the moment. If Memory Lane was available, I would be tempted to buy it for the pictures alone. I have used Lightroom for years and just recently upgraded to lightroom 5. It's a big milestone and I'm very happy with it except that I'm having trouble with my two small iPhones. In the past I've had to use the app 'Fix White Balance' to improve the photos, I no longer have to do that. Initially I saw some improvement using my new phone after. I'm now using my iPad and it's almost perfect. (I don't have the issue where some photos come out dark or light in the mac version.) Hi! I am very pleased with Lightroom 5 and really like it. However, it is limited by the performance of my computer. The display of adjustments is painfully slow and I am very limited in what adjustments/tools I can use. When I enter a mode such as develop, I can save the image, but will have to wait until the preview is updated for anything to be seen. When I select a different function, the image doesn't change immediately on the screen, but does so once I save the file. The thing that I really hate about LR5 is that it now updates the image on the screen, but the preview is still slow to change. The fact that it keeps the image on screen after it has saved the image and before the image has changed, forces me to save the image and bring it back to the display before I can use the adjustment tools. This really annoys me!

You can apply some compelling and overall background-shadows across any photo, and you can see the effect in all honest daylight settings, not just with one particular toned light. You can even simply adjust the saturation or brightness in a single spot, and then apply the adjustment on an entire image. The adjustment values then continue to work even in a slight refocus of the photo elements. You can do a similar check on the lighting of a single area, and then apply the change everywhere it applies. With one click, you can even scale just a few parts of a photo up to hugely larger sizes. You can add uniform shadows, or negative ones, or then switch to a vertical or horizontal perspective that is completely different. You can switch from the picture's regular back to a perspective that lets you see the image's edges, and then back again to the regular view. You can apply various photo effects, including a smooth focus effect, and then re-orient without losing this effect. You can even apply subtle underwater, or freeze motion effects, and paint on the edges that can be lost. You can also easily blend colors or make them negative. Photoshop has an Ink Tool that lets users experiment with a wide variety of unique and creative effects. In just minutes you can make your own carved-out Celebrity portraits and then share them as a high-resolution PDF file. This system uses a modern color theory and ink tool to color, pattern and curate each element on the face of the person in the picture.

With Share for Review, designers can work together on a project from any device to review and comment on an image online, without leaving Photoshop. Designers can zoom in to specific areas by tapping to select the area, and refine the selection from within Photoshop, without the need to switch apps. Users can also see a running list of comments gathered when viewing the image in Photoshop, and can reply from within Photoshop. Mobile check-ins are also now possible. To accelerate collaboration and sharing, Photoshop now includes an intuitive navigation bar with a top level workspace for a clean, easy mechanism to navigate around a composition. Users can switch between panels, objects and layers from the navigation bar. Photoshop will also automatically adjust tool sizes to match the available work area, and become progressively translucent when the work area is out of bounds to provide more visibility, so users do not need to reduce opacity to see the entire Photoshop workspace. This change is driven by extensive experimentation with the new navigation bar, and it is now recommended as the preferred method for navigating Photoshop. “Our customers have long asked for a better collaboration workflow for Photoshop, and the team has been listening. Thanks to the feedback we received during internal tests and our own experience with the navigation bar, we have designed a significant shift in how designers interact with Photoshop, and how they can collaborate,” said Chris Nassen, senior director of product innovation, Adobe, and lead architect for Share for Review.
